

## Data Release Statement Burkina Faso

### BFA District Sanitaires Boundaries 2022

June 2023

#### Abstract

Under the direction of Burkina Faso's Ministry of Health and Public Hygiene (MSHP), updated health districts (*districts sanitaires*) were created by aggregating the official administrative boundaries from the BNDT 200 (National Topographic Database from 2012) data obtained from the IGB (L'Institut Geographique du Burkina).

## I. Introduction

The operational working unit of Burkina Faso's Ministry of Health and Public Hygiene (Ministère de la Santé et de l'Hygiène Publique, MSHP) is the health district (*district sanitaire*). There are 70 such health districts in the country. This document details the methodology used to produce the most up-to-date version of the health district boundaries, the dataset BFA Districts Sanitaires 2022.

Burkina Faso's National Health Development Plan (Plan National de Développement Sanitaire, PNDS, 2021-2030) is focused on improving the management of the public health system through strategic planning and resource distribution, with the goal of providing equitable access to and use of health services. Implementing the plan requires stakeholders to have tools such as an updated national health map and a comprehensive national health information system.

The national health map (*carte sanitaire*) was last updated in 2015. Creating an up-to-date health map requires health districts' current geographic boundaries. Health districts are, by definition, aggregations of the subnational administrative level 3 units (*communes*) and city level boundaries (*arrondissements*). Before GRID3's efforts, the only health district boundaries available to the MSHP had been created with the data from the 2002 Base Nationale de Données Topographiques (BNDT) database. These boundaries are now outdated since the boundaries of many communes were redrawn. It was therefore imperative to update the health districts' boundaries.

The MSHP's Direction des Statistiques Sectorielle (DSS) under the Direction Générale des Études et des Statistiques Sectorielles (DGESS) organised a workshop in December 2022 with GRID3's support. The workshop validated the updated health district boundaries.

This document outlines the main steps taken to update the health district boundaries using the most recent Base Nationale de Données Topographiques, the BNDD 200 from 2012, *arrondissement*, and sector data, and a table obtained from the DSS detailing which communes and *arrondissements* make up each of the 70 health districts. The new health district boundaries can be used to create an updated health map and support planning; by extension, they can support decision-making in the health sector.

## II. Data and Methodology

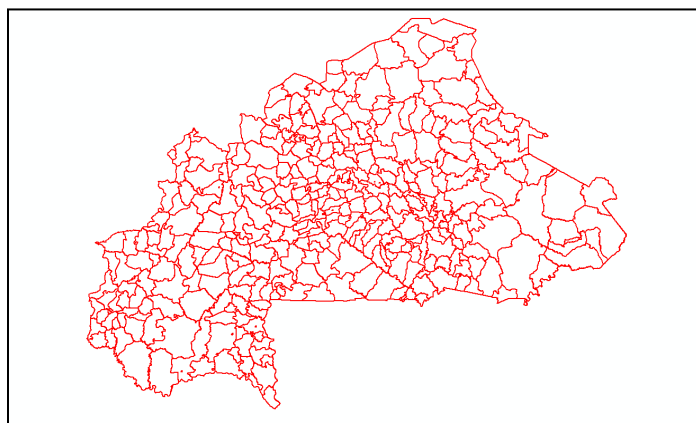

### Input Data

This section describes the two input data used to update the health district boundaries: the subnational administrative level 3 (commune) data from the 2012-2015 BNDD database (BNDD

200) and the *arrondissement*/sector boundaries (BD PV Ouagadougou and BD PV Bobo-Dioulasso licensed for this use by the IGB (L'Institut Geographique du Burkina) in November 2022).

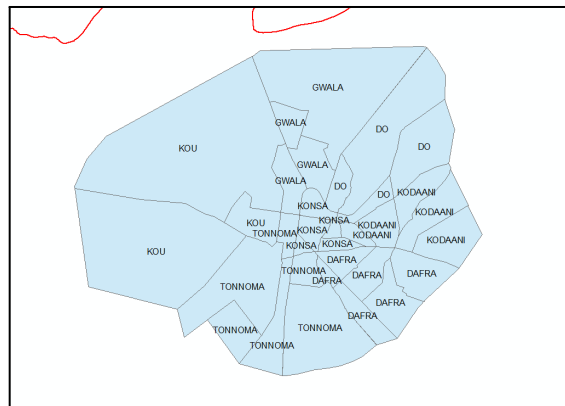

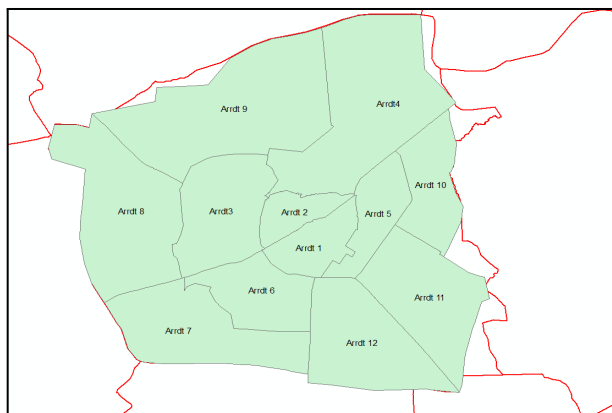

The subnational administrative boundary data are the basis for updating the health district boundaries. In Burkina Faso, the administrative hierarchy is as follows: region is administrative level 1; province is administrative level 2; and communes are administrative level 3. The last category are at the city level and are located in the communes of Ouagadougou and Bobo-Dioulasso.

**Figure 1.** Burkina Faso Administrative level 3 boundaries, 351 communes

The communes with the most populated urban areas are further divided into municipal *arrondissements* (BD PV Ouagadougou and BD PV Bobo-Dioulasso), which are themselves further divided into administrative sectors.

**Figure 2.** Arrondissement boundaries (left: BD PV Ouagadougou, right: BD PV Bobo-Dioulasso)

## Methods

Updating the health districts boundaries involved a mostly straightforward merging of communes, *arrondissements*, and sectors within a GIS system. In the Centre Region, however, the Ministry of Health’s district data managers (CISSE) worked together to delineate boundaries of the various health districts. To do this, the national coordinator of the GRID3 programme presented the cartography of the Centre Region in QGIS at a working meeting in Koudougou on 9 December 2022. Then, with the help of the CISSEs, the sectors straddling more than one district were identified and then delimited by editing the digital boundary. For the most part, these sectors followed natural boundaries (rivers, roads) well-known to the CISSEs and the head nurses of the relevant stations.<sup>1</sup> After this step, the health district boundaries were verified by the Ministry of Health staff also present.

Annex 1 provides a detailed documentation of the steps taken to update the health district boundaries using the 2012-2015 BNDT 200 administrative level 3 boundary data and the *arrondissement* and sector data. Future updates could use the same methodology, if appropriate.

## Validation Process

Ministry of Health staff participants at a working meeting in Koudougou on 9 December 2022, verified and validated the 70 health district boundaries through a collaborative and inclusive process. The new health district boundaries shape file was named: BFA\_Districts\_Sanitaires\_2022.

## III. Dataset Description

### Extents

West -5.557604 East 2.478452

North 15.097216 South 9.374664

### Dataset Codebook

These vector data, in shapefile format, contain 70 records corresponding to 70 health districts. Each health district has the following attributes: *district sanitaire* name, *district sanitaire* number, and region name.

Field Name	Description	Field Type	Details
------------	-------------	------------	---------

---

<sup>1</sup> Open Street Map was used with QGIS software.

FID	Automatically generated unique ID number for each unit	Object ID	ArcGIS system-managed value that uniquely identifies a record or feature
Shape	Type of shape - all polygons	Geometry	ArcGIS system-managed value that identifies the feature type
Nom_DS	Health district name	Character	The name of the <i>district sanitaire</i> with “DS” in front as assigned by the ministry
Numero_DS	Health district number	Numeric	A number from 1 to 70 is assigned to each <i>district sanitaire</i> by the ministry. The number order is based on the alphabetised list of <i>district sanitaire</i> . The health district numbers used here correspond to those used in the parallel on going MSHP effort to create a master facility list under the MoH.
Region	Region where the health district is located	Character	The name of the region (administrative level 1) the <i>district sanitaire</i> is within, as assigned by the ministry of health

## V. Known Data Limitations

These data are derived from the Base Nationale de Données Topographiques BNDT 200 (from 2012) administrative commune, and the district boundaries for Ouagadougou and Bobo-Dioulasso. Any misrepresentations including but not limited to spatial accuracy, nomenclature, or omission are attributable to these underlying data layers.

## VI. Disclaimer

CIESIN, Columbia University, and the GRID3 programme follow procedures designed to ensure that data disseminated by the project are of reasonable quality. If, despite these procedures, users encounter apparent errors or misstatements in the data, they should contact Burkina Faso’s MSHP at [contact@sante.gov.bf](mailto:contact@sante.gov.bf) or CIESIN at [info@ciesin.columbia.edu](mailto:info@ciesin.columbia.edu).

The Ministry of Health and Public Hygiene (MSHP) of Burkina Faso, CIESIN, Columbia University, and their sponsors do not guarantee the accuracy, reliability, or completeness of any data provided. We provide these data without warranty of any kind whatsoever, either expressed or implied, and shall not be liable for incidental, consequential, or special damages arising out of the use of any data provided.

## **VII. Acknowledgments**

Funding for the development and dissemination of this dataset was provided by the Bill & Melinda Gates Foundation and the United Kingdom's Foreign, Commonwealth & Development Office. Technical support for the production of this data layer was provided by CIESIN.

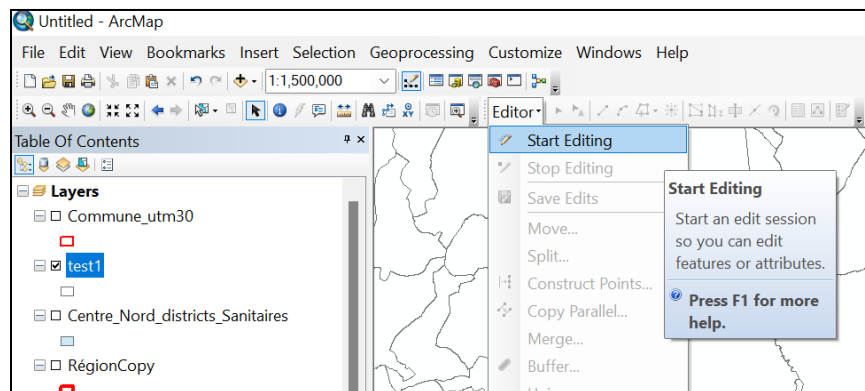

## Annex 1

### Detailed Steps

These instructions detail the steps taken to create the Burkina Faso BFA\_Districts\_Sanitaires\_2022 health boundaries layer. ESRI software was used, but other software (such as QGIS) could be used to achieve the same result.

Steps 1 to 5 are general and the figures below show an example of how to create the *district sanitaire* of Mangodara by aggregating the appropriate communes.

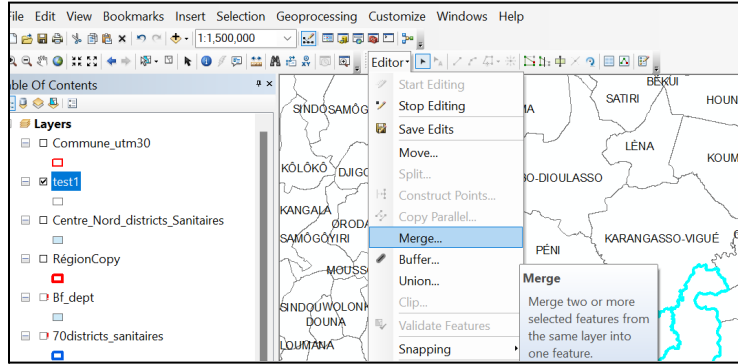

1. First right-click on the editing tool and select “Start Editing”

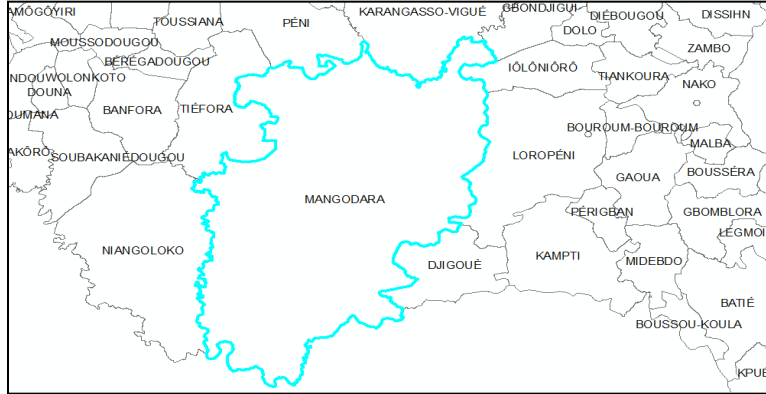

2. Select the communes that comprise one health district using the “Select” tool. The boundary color for the selected layers will change to cyan

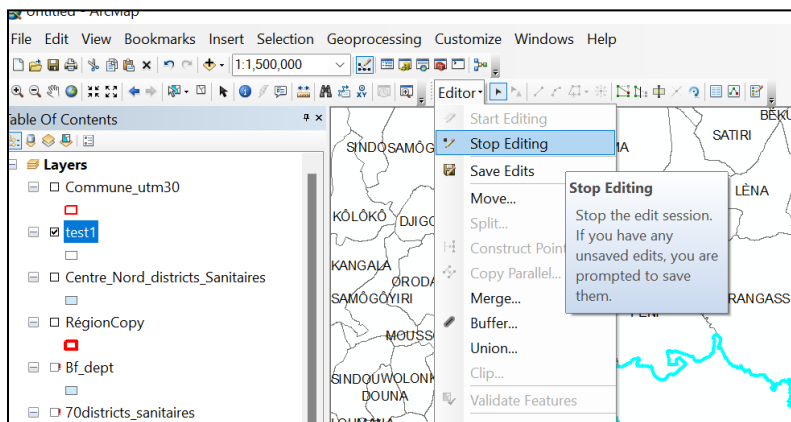

3. Right-click on “Editor” and select “Merge” to merge the selected communes into one health district.

4. The boundaries between the communes are dissolved and the newly created *district sanitaire* will have a single boundary.

5. Repeat the process for all health districts.
6. Once all the communes have been merged into the appropriate *district sanitaire*, right-click on the editing tool and select “Stop Editing”.

### **Additional Steps for the Communes of Bobo-Dioulasso and Ouagadougou**

The *arrondissement* boundaries for both Ouagadougou and of Bobo-Dioulasso were required in

order to complete the *district sanitaire* layer update; this was necessary because both cities extend into several health districts. The area of the commune containing Ouagadougou falls into five (5) separate health districts, while the commune containing Bobo-Dioulasso covers two (2) different health districts. The *arrondissement* boundaries are further subdivided into sectors. In the case of Ouagadougou, these sectors fall into different health districts.

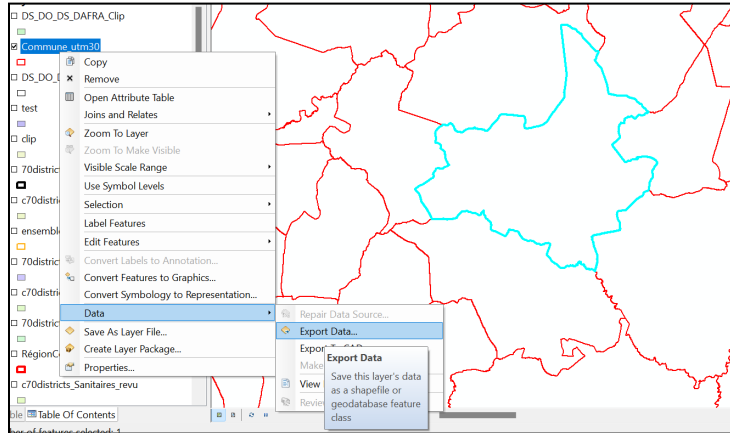

### ***Ouagadougou Commune***

The city of Ouagadougou covers parts of five (5) *district sanitaires* and several sectors. We first merged the different sectors based on their respective associated health district/s; information obtained from the MSHP. The resulting layer was used to “Erase,” with the layer resulting from the fusion of all the communes that were obtained. Then the result obtained from “Erase” is used to make a “union,” with the layer resulting from the fusion of the sectors

### ***Bobo-Dioulasso Commune***

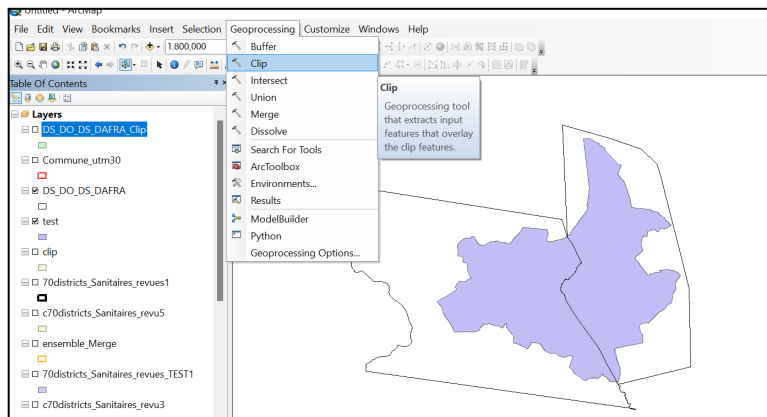

Additional steps were required to create the *district sanitaires* of Do and of Dafra, as the commune of Bobo was split between these two health districts. The boundary dividing the *arrondissement* Do from the *arrondissement* Dafra was used to split the commune of Bobo-Dioulasso into the section that belonged to the *district sanitaire* of Do and the section that belonged to the *district sanitaire* of Dafra. To accomplish this, the commune of Bobo-Dioulasso was extracted from the commune file. Then the boundary dividing the *arrondissement* of Do from the *arrondissement* of Dafra was used to cut the commune of Bobo-Dioulasso into two sections. The resulting separate polygons were then each merged into the appropriate *district sanitaire* (Do and Dafra).

1. Extracting the boundaries of the commune of Bobo-Dioulasso
  - a. Using the attribute table from the commune boundary layer, the commune of Bobo-Dioulasso was “selected”.
  - b. Right-clicking on the commune boundary layer produced a dialog box; “**data**” was selected, then “**export data**” was selected
  - c. The exported data (the commune of Bobo-Dioulasso) were saved.

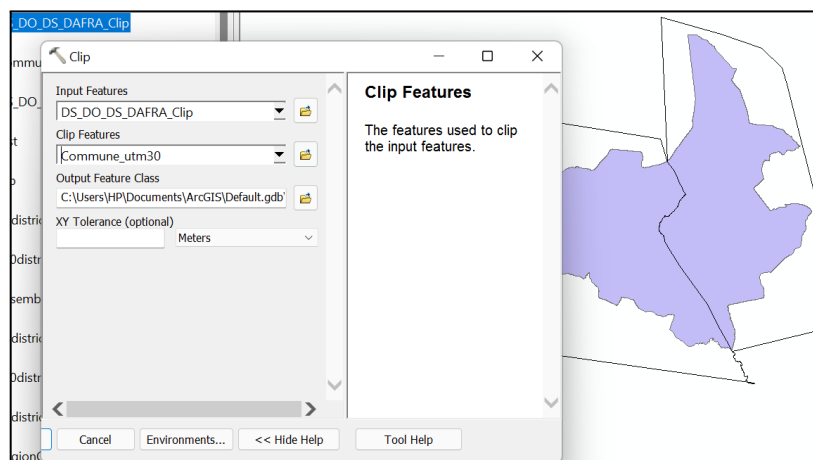

2. Clipping the Bobo-Dioulasso commune into two parts (one belonging to the *district sanitaire* of Do and the other to the *district sanitaire* of Dafra)

- a. The “Clip” tool was selected from the “Geoprocessing” menu.
- b. The polygon of the commune of Bobo-Dioulasso extracted in the previous step was used as the “input feature.”

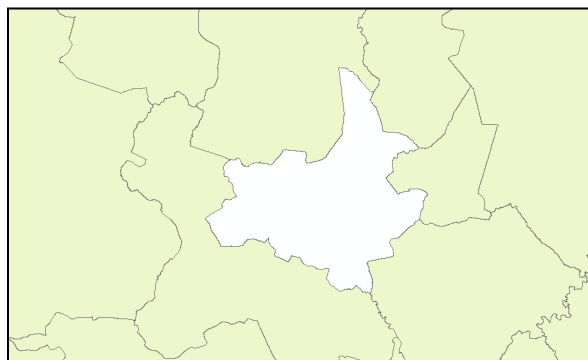

c. The *arrondissement* layer of Bobo-Dioulasso was used as the “clip feature.”

- d. The result of the clip is that the commune of Bobo-Dioulasso is divided into two parts, the *arrondissement* of Do and the *arrondissement* of Dafra.

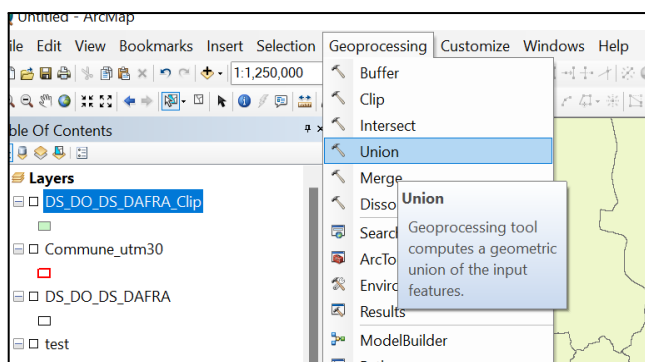

### 3. Integration of the two newly created *arrondissements* of Do and *arrondissement* of Dafra into the *district sanitaire* layer

- a. The “Erase” tool in ArcMap was used to create a “hole” in the newly created *district sanitaire* layer (where the single polygon representing the limits of the Bobo-Dioulasso commune had previously been).
- b. For the “Erase” tool, the “input features” were the *district sanitaire* layer and the “erase features” were the newly created Bobo-Dioulasso commune layer with the two *arrondissements* (Do and Dafra).
- c. The result is a *district sanitaire* layer with “hole” the exact size and shape of the newly divided commune of Bobo-Dioulasso.

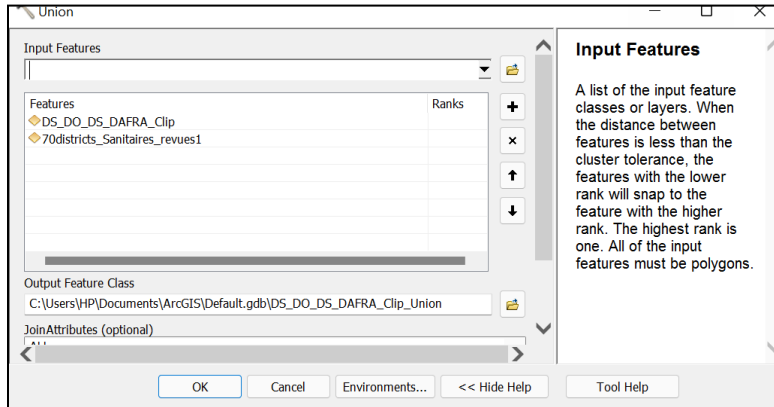

### 4. Adding the divided commune of Bobo-Dioulasso into the *district sanitaire* layer to fill the newly created “hole”

- a. Select the geoprocessing tool from the menu and right-click on “Union”.

- b. For the “Union” tool, the two “input layers” are: the *district sanitaire* layer resulting from “Erase” and the commune of Bobo-Dioulasso divided into two

arrondissements.

c. The final result is the integration of the *district sanitaires* of Do and Dafra into the newly created layer.

## IX. Annex 2

List of *districts sanitaires* and their communes received 9 December 2022 from the district data managers (CISSEs)
